CORNIX DRIVE-IN SYSTEM "TRAVIDRIVE®"

The CORNIX DRIVE-IN SYSTEM "TraviDrive®" is indispensable where big quantities of the same product with a high turnover rate have to be stored.

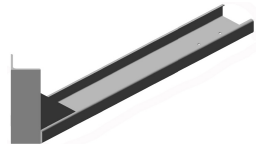

The DRIVE-IN system is based on the LIFO principle i.e. last in, first out. Providing a change in design your DRIVE-IN can be altered into a DRIVE-THROUGH. This system is then based on the FIFO principle i.e. first in, first out.

The occupied space needed by the DRIVE-IN system CORNIX "TraviDrive®" is minimal, as only a minimum of aisles are required.

One drives "in" or "through" the installation. This is of great importance where available space is either limited or expensive. (e.g. freezers or refrigerated areas).

- ① **Continuous frame protector "boat" type.**
An absolute must in order to avoid damage to the frames caused by forklift trucks.
These protectors are anchored to the floor.
- ② **Stability tunnel** for an increased stability.
- ③ **Other colours** are available at extra charge.
Standard colours : frames, bracing, beam rails, ... : sendzimir. Brackets, protections, entry guides, ... : yellow RAL 1018.
- ④ The sendzimir beam rails are fixed to the **brackets** which are available in different types and sizes as to optimize your installation.
Different types of **rails** are available as to meet with your requirements : with or without nose, angle, ...
Entry guides : protects the upright from shocks caused by pallets and guides the pallets into the bay. Available single- or double-sided.
Bracing at the back and above. Width (110, 127, 140 or 160 mm) and gauge of **upright** according to the requested loads.

CORNIX

**EUROPE'S FIRST MANUFACTURER
OF STORAGE SYSTEMS**
